To Whom It May Concern

Re: ASTM-C-483

With reference to the ASTM Test C-483 for Electrical Resistance of Conductive Ceramic Tile, the test has been withdrawn without replacement.

The inert qualities of the ingredients in the fired product do not promote or provide electrical resistance values. This indicates the material is electrically resistant and thus non-conductive. The test was not part of the ANSI 137.1 Specification for Ceramic Tile and given the non-conductive nature of porcelain tile was rarely run.

You can find more information about our many tile products, along with other Product Performance Data and installation specifications at www.crossvilleinc.com or call (931)-484-2110.
